

THE VACUUM DRUM MIXER IS THE SOLUTION FOR YOU

The vacuum drum mixer is a great solution for customers who prefer to mix their product directly in the shipping container. A drum or bucket is secured on a steel platform using a mouting bracket and tightening strap. The vacuum bell can then be lowered and vacuum applied. Two sight glasses provide visual access to the product during the process and an electronic vacuum switch monitors the level of vacuum applied. A semi-automatic control panel can automate the vacuum and mixing process through easy to set timers. A single start button runs the entire process.

SPACE AND TIME SAVER

This setup can save space and time in smaller factory settings and offers simplistic mixing with no intermediate vessel. It is truly a plug and play solution for vacuum drum and bucket mixing.

WHY CHOOSE SCHOLD

A trusted name since 1949, **Schold** has made breakthroughs and improvements, but one thing has held true—we have continually remained a **client-centric solutions provider**. While we offer a variety of standardized machinery models, we will also work with you to design, fabricate and install entirely **customized solutions** based on your application needs. Beyond installation, it is our commitment to provide unparalleled customer service. You can count on **Schold** for more than just reliable equipment, you can count on us to be a **trusted partner to your business**.

BETTER DISPERSIONS.

CONVENIENCE |

Mix your product directly in the shipping container. Whether it be drum, bucket, or anything else, your product is efficiently processed inside the vacuum bell.

SAFETY ENGINEERED |

Pressure gauge and sight glasses, as well as an electronic vacuum switch allow easy monitoring of the product and process through full vacuum.

ROBUST DESIGN |

Bell drum certified for full vacuum, and then some. Stainless steel agitator shaft, tapered and turned for high-efficiency and stable dispersing.
